Trains stopping at Summit Switch will make rear end air test as per Rule 17.

Westward freight trains not stopping at Summit Switch will make running air brake test between wye switches as follows:

While working steam, engineer will make a reduction of approximately 7 pounds, waiting for slack to adjust itself and then add about 3 pounds more so as to make a total reduction of 10 pounds before releasing.

Conductor will note reduction in brake pipe pressure on caboose gauge and following build up in pressure when brakes are released, then give proceed signal which will be relayed to head end by other trainmen from their portion of the train, providing they note release at the retainer of the car upon which they are riding.

If conductor is on the head end, rear brakeman is held responsible for such observance of the gauge as will insure against danger from closed angle cock or low pressure. When such observance indicates danger, take any needed precaution as the circumstances warrant.

If releasing of brakes cannot be made at a speed greater than 15 miles per hour, stop and make rear end air test as per Rule 17.

At any point where brake pipe has been separated, rear end test will be made in accordance with Rule 875 of Transporation Rules and Rule 17 of Air Brake Rules.

Leading enginemen will not signal brakeman to open angle cock until last helper engineman coupling into rear of train has indicated by one long blast of the steam whistle that rear portion of train is coupled and ready for compliance with Rule 17 of Air Brake Rules.

Between one mile east of Cameron and Mojave Yard maximum speed of engines running light over eastward track will be 25 miles per hour.

Engines running light must not exceed freight speed, except Consolidation and lighter engines may run 25 miles per hour where freight speed is 20 or 22 miles per hour.

Trains handling relief outfit must not exceed 25 miles per hour on main track, Exeter and Kerman, Fresno and Famoso, via Sanger, 15 miles per hour over other lines and 15 miles per hour on curves of 5 degrees and over. Where freight speed is less, be governed thereby.

Nos. 25 and 59 will not make up any time on their schedules between Tehachapi and Ilmon.

MISCELLANEOUS

1. At the following stations freight trains descending grade between Caliente and Lang will stop 10 minutes to allow heat to equalize in wheels and to permit train inspection.

Marcel.—(Unless stop made as noted below).
Rowen.—(Unless stop made as noted below).
Cooling stations at Marcel and Rowen based on continuous run without interference.

In order to take care of short movements, one siding to another, be governed by the following:

At irregular stops when 10 minutes is allowed for purpose of cooling wheels and making train inspection, it must be understood that after the first stop, based on not to exceed seven miles as a continuous run, train must not proceed for greater distance than 8 miles before again stopping 10 minutes to allow wheels to cool and make train inspection. After the second stop, greater distance than 10 miles must not be made before again stopping 10 minutes to permit of cooling wheels and making train inspection. Particular care must be taken to see that continuous run is not made from Rowen to Caliente when a continuous run of not to exceed seven miles has not been made prior to arrival Rowen.

East of Warren. Between mile posts 376 and 377 on tangent track.
Paris.
Russ.—(Unless stop at Ravenna).
McKittrick Branch.—Between Mile Posts 357 and 358.
Owenyo Branch.—At Rand.

2. Freight trains taking siding where it is necessary for them to open their own switch, and where necessary to apply train (automatic) brakes, stop and allow sufficient time to insure release of all brakes—one to one and one-half minutes is usually required for this purpose. Be governed by gauge and time duration in this operation.

3. Conductor report to Superintendent, by wire, any failure to properly control train by air brakes and deliver to Car Inspector at first terminal list showing tonnage of each car in train. Car Inspector will add to list the piston travel of each car in train, as shown by test made before road engine is cut off, also result of three-minute test of all retainers. The list will then be forwarded to Superintendent by first mail.

4. The maximum tonnage per operative brake between Caliente and Mojave is 115 Ms and between Mojave and Saugus 120 Ms.

5. **Retainers** will be used on passenger trains as follows:

Eastward trains	Cameron to Mojave—All retainers
Eastward trains	Vincent to Acton—Available retainers
Westward trains	Vincent to Harold—Available retainers
Westward trains	Tehachapi to Caliente—All retainers

On trains having not to exceed two head end cars available retainers will be used Cameron to Mojave and Tehachapi to Caliente.

Retainers will be used on freight trains as follows:

Eastward trains	Cameron to Mojave
Eastward trains	Vincent to Lang
Westward trains	Vincent to Harold
Westward trains	Tehachapi to Caliente
Westward trains	Caliente to Ilmon; first ten available retainers from head end.
Westward trains	McKittrick to Lokern
Westward trains	Mabel to Linnie
Westward trains	Searles to Garlock

Retainers will be used on other districts when in judgment of enginemen it is deemed necessary.

Where retainers are used the rate of speed of freight trains on any grade of over one per cent will not exceed 25 miles per hour, and on grades of this character MORE THAN FIVE MILES LONG, FOR THE FIRST FIVE MILES THE TIME CONSUMED IN TRAVELING ONE MILE SHALL NOT BE LESS THAN THREE MINUTES. The above maximum speed restriction will not affect the speed on heavier grades and other locations, where the maximum is now provided. Retainers on eastward freight trains entering Mojave must not be turned down until train comes to rest on designated tracks.

6. Rear brakeman will open valve on rear of steam heat line and valve must be closed on engine at yard limit boards—Fresno, Bakersfield and Mojave. At other points: Station one mile board. Exception, Mojave trains not requiring disconnection of train line.

7. Helpers will cut out at Vincent unless otherwise instructed.

Helpers cut out at Summit Switch and ordered through to Mojave will precede train from Summit Switch, unless otherwise instructed.

Helper engines cutting out of eastward trains at Summit Switch, enter wye from east leg.

In taking water on freight trains with helper cut in, train will be cut ahead of first helper from head end and will back to point where it is to take water. After stopping, train will be cut ahead of following helper.

Should a stop be made short of a turnout at a point where helpers are to be cut out, cut will be made ahead of leading helper and train engine will pull head portion to clear, to prevent damage done by helper in shoving during short move.

In movement of light engines between Bakersfield and Mojave the number of engines coupled is restricted to four.

Westward freight trains will stop east of crossover Summit Switch to make plug test.

8. **Fresno.**—Eastward trains entering yard will be governed by signal from Herder as follows:

Trains via Merced, green signal.
Trains via Kerman, yellow signal.

Trains entering or leaving through passenger station tracks designated below will not pass Merced or Kern Streets without signal from Yardmen.

Main Line	Depot No. 1.
	Depot No. 2.
	Depot No. 3.
	Depot No. 4.
Back Lead.	

Mojave.—Trains entering or leaving west end of yards be governed by following hand signals:

Westward	Green signals.
Eastward	Yellow signals.

Trains entering or leaving east end of yard be governed by following hand signals:

Southern Pacific	Yellow signals.
Santa Fe	Green signals.

Trains from Owenyo Branch stop before fouling main track, regardless of position of derailer or signals received.

Following code of signals will govern eastward trains entering yard:

Southern Pacific:

Passenger trains	One long.
Freight trains	One short, one long, one short.

Santa Fe:

Passenger trains	One long, one short.
Freight trains	One long, one short, one long.

9. **Fresno.**—Trains from Friant Branch and Sanger Branch stop at "stop" board at junction of these lines.

Goshen Jct.—Trains from Visalia Branch stop at "stop" board east end of yard.

Exeter.—Eastward trains stop at "stop" board at junction with Porterville Branch.

10. At least two loaded steel underframe cars must be placed immediately ahead of 2-10-2 type engines that are engaged in helping.

11. **Goshen Jct.**—End of the Visalia Branch will be at first switch east of the station where it enters Bakersfield-Fresno main track.

12. At Caliente, Bealville and Marcel siding next to main track will be known as eastward siding; back track will be known as westward siding.

13. At Rowen, siding between intermediate switches is designated as middle siding.

Siding east of middle siding is designated as westward siding.
Siding west of middle siding is designated as eastward siding.
Normal position of intermediate switches will be for continuous movement through sidings.

First-class trains will use middle siding entering at initial switch of this siding.

Trains using other than designated siding will do so under flag protection or when authorized by train dispatcher.
